

Flexi 10

THE LEADING SOFTWARE FOR SIGN MAKING

FLEXIFAMILY 10 SET A NEW INDUSTRY STANDARD

with robust new features geared toward maximizing production. Flexi excels as a one-stop software solution for sign makers with a wealth of industry-specific design tools, thousands of drivers for cutters, printers and hybrids, all wrapped in an intuitive, easy-to-use interface. **FlexiFAMILY 10 is the leading software for sign making!**

DesignCentral is the heart of Flexi's interactive menu system

Gradients, fills and strokes are defined with ease through Flexi's Fill/Stroke Editor

Easily navigate between objects, groups and layers with DesignEditor.

POWERFUL AND INTUITIVE FEATURES

SO Diffusion

SAi's newest dithering technology eliminates banding to produce the smoothest gradients and most vibrant, accurate output of any other diffusion method. Processing speeds are highly competitive. SO Diffusion is nearly as fast as FMXpress while yielding higher quality output.

Multiple Contour Cut Paths

Create multiple contour paths, customize your own contour path style, and assign different colors to each path. You can also adjust different settings for each contour in the Contour tab of the RIP & Print dialog.

Send to VersaWorks™

Flexi 10 seamlessly integrates with VersaWorks to boost your productivity! It's a snap to send your design from Flexi directly into your VersaWorks jobs queue. Easily create a device setup and send to VersaWorks.

Nesting

True Shape Nesting gives you the ability to automatically arrange different geometrical shapes together in order to use the least amount of material possible. True Job Nesting allows you to nest multiple print jobs within Production manager. Both features save you time and money, and both are inherent features in Flexi 10.

Color Profiling

With Flexi 10 you get consistent control of color and you save yourself time and energy, not to mention wasted paper and ink. Harness the power of Flexi's open architecture which allows you to use many different devices including the X-Rite® i1Pro spectrophotometer. Make profiles, not mistakes with Flexi 10.

Compatibility

From the latest and greatest print drivers, to legacy cutter drivers, Flexi 10 has your back with over 2,100 drivers to run just about any cutter or printer on the planet. In addition Flexi 10 has thousands of ICC profiles built in, giving you the best print quality available in the least amount of time. Whether you are running a state of the art sign shop, or simply cutting stickers on an old plotter, Flexi 10 is the software for you!

Versatility

The Flexi 10 FAMILY offers a full line of 5 different products for professional sign making. Whether you are looking for a simple package for text layout and vinyl cutting, high production features with cutting and printing tools or something in between, SAi has a software solution for you.

NEW FEATURES IN FLEXI 10

Ink Estimation

Eliminate the guesswork of job costing, with the exciting new Ink Estimation tool in Flexi 10. Estimate how much ink each print job will use to help calculate the true cost of every print job. Even the most seasoned print shops will find this feature to be an incredibly useful tool. Gain a better understanding of your production and make more informed decisions about upcoming expenses, incoming jobs and daily workflow with the Ink Estimation tool.

Send to Sign Tracker

Send a thumbnail of each print job from Flexi directly to Sign Tracker, SAi's business management software. Now you have a visual proof for every invoice you generate.

Bad Wrap™ Support

Design a vehicle wrap using Bad Wrap templates without having to switch software! Flexi 10 now supports designing in layers for full-sized Bad Wrap templates.

Smooth Shadow

This new advanced shadow feature is one of the most requested features by Flexi users. Smooth Shadow allows you to apply transparency effects to shadows for smoother and softer edges, taking your design work to a whole new level.

Advanced PDF Support

This feature is sure to save sign shop owners hours of headache! New in Flexi 10, a link option has been added to the import dialog for Adobe® PDF files. Linking the PDF file will ensure that the proper colors are used from the original file. Text and objects can be added and the Make Transparent Tool and Contour Cut effect can be applied. Flexi will apply these actions while keeping the original colors, blends and transparencies intact.

Contour Cut Nesting in Production Manager

Now you can nest contour cut jobs right in Production Manager. Add jobs with multiple contour paths from 3rd party applications directly into Production Manager and eliminate the extra steps. This is just one of the many ways Flexi 10 is increasing your productivity.

Unlimited Split Lines

Add, delete, and move split lines for maximum flexibility. Place split lines anywhere—in between letters, beside lines of text, even place multiple lines across large objects. Plus, delete discreet lines in small spaces. This feature makes weeding easy, accurate, and effortless.

PlusPRINT

If you are thinking about buying a large-format printer to add to your product offerings, this option is for you. PlusPRINT can be added to FlexiSIGN or FlexiEXPERT products and will give you the ability to print to any of Flexi's hundreds of printer drivers. Just another way that Flexi 10 will help grow your sign business.

Vinyl Color Nesting

When a vinyl-cutting job calls for more than one color, Flexi 10 will nest each color separately. This maximizes media savings and minimizes production time.

FLEXI 10 FAMILY OF PRODUCTS

FlexiSIGN-PRO™ The SAI flagship product offers the total solution for any sign making business. With ICC profile support and built-in direct drivers, FlexiSIGN-PRO offers a complete set of design, cutting, RIPing and printing tools for maximum productivity.

FlexiEXPERT™ The package for the professional sign maker who requires advanced vinyl cutting and bitmap editing tools, without color-printing output. FlexiEXPERT includes full design, text serialization and color tracing features, as well as job estimating for accurate project management and design templates for faster production.
